***Allowable Subject Matter***

Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or suggest a method of producing hydrogen gas from a hydrocarbon gas and steam comprising forming a fluidized bed of a suitable particulate catalyst in a reactor, deploying part of the catalyst in the reactor in a first endothermic dehydrogenation reaction mode, and deploying part of the catalyst in the reactor in a second exothermic oxidation or partial oxidation reaction mode, said second exothermic dehydrogenation reaction mode being physically separated from the first endothermic dehydrogenation reaction mode but enabling the circulation of particles and gases between the first and second modes; and separating said hydrogen gas from other gases in the first endothermic dehydrogenation reaction mode as molecular or atomic hydrogen through a perm-selective membrane permitting the transfer of hydrogen therethrough while minimizing the transmission therethrough of the other gases in the endothermic dehydrogenation reaction mode. U.S. 6331283 discloses a process for separating hydrogen wherein an exothermic reaction occurs adjacent to a selective permeable membrane for separating hydrogen. U.S. 6695983 discloses a process for treating hydrocarbons wherein oxygen is separating through a selectively permeable membrane in an endothermic reaction. U.S. 2698281 discloses an apparatus wherein endothermic and exothermic reactions occur in different parts of a reactor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
